

## **Petition to the Joint Select Committee on Deficit Reduction: Save Radiology, Because Radiology Saves Lives!**

Dear Members of the Joint Select Committee on Deficit Reduction,

Like most Americans, I believe that medical imaging like MRIs, CT scans and mammography is absolutely essential to proper medical diagnosis and treatment. I believe that any cuts by the Super Committee to medical imaging for Medicare recipients—on top of significant reductions Congress and federal regulators have already imposed over the last five years—may seriously limit patient access to these vital medical services.

Medical imaging aids in the early detection, accurate diagnosis and appropriate treatment of medical conditions and diseases. It is critical for anyone facing an uncertain diagnosis to have access to diagnostic imaging. As your constituent, I am asking that you oppose any further cuts to medical imaging.
